Founder Cor Slijkerman

1.20

Introduction

When we say we are 'specialists in kalanchoë', we mean that we are involved in every step op the way: from seed to cutting production and finally production on a large scale, either at our own facilities or at our partners around the world. We are proud to say that we have more than 35 years of experience in cultivating kalanchoë and almost 25 years of experience in kalanchoë breeding.

History

Founder Cor Slijkerman started in 1946 with the cultivation of vegetable crops. After the first greenhouses appeared, Cor started growing gerberas and pot chrysanthemums. His son Johan Slijkerman took over the company, but made a switch to the cultivation of kalanchoë. Johan took the inventive step of starting with breeding of kalanchoë. Nowadays, Stefan Slijkerman (third generation) is in charge of the now internationally operating family company.

Our core values

We represent passion, quality and innovation. Our team continuously works to create and cultivate the most beautiful, exceptional and sustainable products. We are driven to innovate and aim to develop unique, high-quality varieties. We do not settle for creating great products: we

Stefan Slijkerman

aim to cultivate and breed the very best. Because of our years of experience we are able to provide every grower worldwide with a unique and suitable assortment.

The synergy of breeding and production

Since we are both a breeder and grower, we view both processes as inseparably linked. Our breeding is driven by our cultivation experience and product knowledge. Cultivating new unique varieties requires adaptability in our growing process and provides further insight in our product. Production (both nationally and internationally) in its turn provides demands for example 100% biologically cultivated varieties that inspire our breeders to create improved varieties.

hearts collide When

Kalanchoë Supernova®

Supernova®

Meet our latest novelty: the kalanchoë Supernova[®]. Multiple flowers are merged together, reminding of the breathtaking explosion of a supernova. The kalanchoë Supernova has over 50 petals, the flower size can reach up to 5 cm (2") and the shelf life is nearly as limitless as the universe itself.

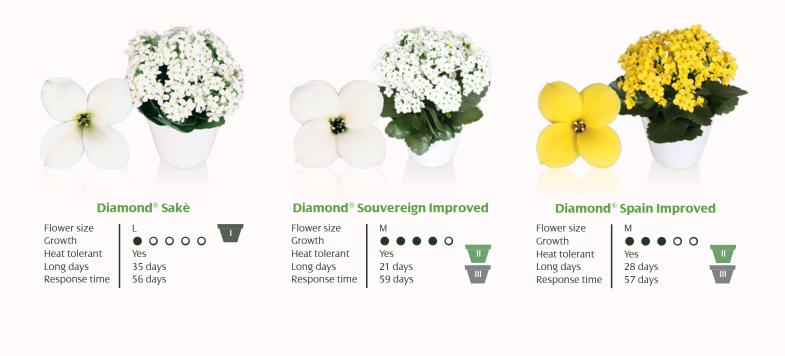

KALANCHOË **DIΛΜΟΝD**[®]

Diamond[®] Single Collection

The word "diamond" originates from the Ancient Greek word "adámas," meaning "unconquerable" or "indestructible." The single-flowered variant of the Diamond Collection has been specifically selected for these characteristics, with outstanding longevity and is also suitable for outdoor use when temperature are above 5°C.

Tiger Safari® Collection

This Tiger Safari Collection consists of three single-flowered varieties that are characterized by contrasting flowers with beautiful drawings. These typical flower hearts are similar to the features of a wild animal. The powerful look of the plants fit the strong appearance of the tiger, to which it derives its name.

Tiger Majestic[®] Collection

The Tiger Majestic Collection is the double-flowered equivalent of the singleflowered series. Due to its double-flowering nature, the shelf life of the plants of this series is relatively long. The Tiger Majestic is also characterized by the designs surrounding the flower heart, which allude to the timeless elegance of the plants.

Soraya[®] Cutflower

The name Soraya originates from the ancient Persian Empire and carries multiple meanings such as gemstone, wealth, and princess. This emphasizes the powerful, feminine energy radiated by the Soraya cutflowers, making it not just a flower but a symbol of refinement, beauty, and royal allure. These long-lasting cut flowers are available in a spectrum of delicate pastel shades.
